MINIPROJECT

As we all know the fall detector system is very useful for older people. This is because it can notify the individual or family member when it detects a fall and reduces the risk of delay in medical attention. So it leads to the development of various types of automatic fall detector systems. Nowadays, we can also find fall detectors in smartwatches, fitness trackers, and other types of wearables. IoT-based fall detector devices can save lives in an emergency. For this reasons I choosen to build an IoT Fall Detector Using MPU6050, NodeMCU ESP8266, and Blynk Application.
